Prior art

WO-A-01/03859 discloses a device for supplying a car wash plant with chemical additives that are added to the wash water, at least one additive being filled into a cartridge in highly concentrated form that can be inserted into a receptacle in a car wash plant, a plurality of additives, each in highly concentrated form, being filled into a plurality of cartridges.

Problem

The problem addressed is that of avoiding confusion of the different cartridges.

Solution

Each cartridge and each corresponding receptacle differs from the others to ensure proper flange mounting. Connections made in this way (flange mounting without the possibility of confusion) are not found in car wash plants. A person skilled in the art has other possibilities for solving the problem, e.g., uniquely color-coding the cartridges, and would not automatically arrive at this particular solution.

Claims 2-11 are dependent on Claim 1 and thus similarly
